

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

**Claim 1 (Currently amended):** Filter system for a household dishwasher comprising a wash space (11) and a liquid circuit that comprises a ~~course~~ coarse sieve (33) having a collecting part (34) and one or several fine filters (18, 19), the coarse sieve (33) being movable between a first position and a second position with the aid of actuating means (29, 31) arranged in the dishwasher

~~wherein the first position of the coarse sieve is located within a flow of rinsing liquid such that the rinsing liquid can flow through the coarse sieve, and~~

~~wherein the second position of the coarse sieve is located above the flow of rinsing liquid such that the rinsing liquid cannot flow through the coarse sieve~~

wherein when the coarse sieve (33) is in the first position, the collecting part (34) is positioned within a flow of rinsing liquid such that the rinsing liquid can flow through the coarse sieve, and

wherein when the coarse sieve (33) is in the second position, the collecting part (34) is positioned above the one or several fine filters (18, 19).

**Claim 2 (Currently amended):** Filter system according to claim 1 characterized in that the ~~course~~ coarse sieve (33) is in the first position during the main part of the cleaning phase whereas the coarse sieve is in the second position during the main part of the rinsing phase.

**Claim 3 (previously presented):** Filter system according to claim 1 characterized in that the collecting part (34) of the coarse sieve includes a circular wall part and a bottom.

**Claim 4 (Currently amended):** Filter sieve according to claim 1 characterized in that ~~course~~ coarse sieve (33) is provided with a filtering area (37) serving as a ~~course~~ coarse sieve for the circulating liquid when the coarse sieve is in its second position.

**Claim 5 (original):** Filter system according to claim 4 characterized in that the collecting part (34) of the coarse sieve (33) is provided with a circular wall part and a bottom (36) whereas the filtering area (37) area constitutes an extension of the circular wall part below said bottom (36).

**Claim 6 (previously presented):** Filter system according to claim 1 characterized in that said means (29, 31) are activated and/or deactivated by a program control.

**Claim 7 (previously presented):** Filter system according to claim 1 characterized in that the bottom of the wash space (10) is provided with a liquid collecting container (17) divided into a first and a second chamber by means of the fine filter (19), the first chamber communicating with a circulation pump whereas the second chamber is arranged to receive the coarse sieve (33).

**Claim 8 (canceled)**

**Claim 9 (previously presented):** Filter system according to claim 1 characterized in that said actuating means is placed below the coarse sieve.

**Claim 10 (previously presented):** Filter system according to claim 9 characterized in that said actuating means (29, 31) is a wax actuator.
